

Using Filezilla

Server: ip address

Username: ubuntu

Password: ngs.pem

New site connection:

To get easy access to your files for download/upload:

1. Click "Site Manager" and "New Site"
2. Add your host and user details, and change log on type to "key file"
3. Use the options in section 3 to navigate to where you want to download the data to.
4. Use the options in section 4 to navigate to the folder you want to download from. You can click through, or you can type the location in to the "Remote site" bar
5. Drag and drop from the right-to-left to download from the server, or left-to-right for uploading to the server
